

BRINGING COMPLETE PEACE OF MIND TO BANKING OPERATIONS

**Securing Data,
Ensuring Privacy,
Promoting Cost Efficiency**

Challenges

Data Privacy

Contributes to meeting Swiss Banking Act, FINMA, FADP, GDPR and soon DORA requirements

Data Security

Threats of data breach, data exfiltration or ransomware are constantly on the rise

Ransomware Extortion

Threat of malicious publishing or use of stolen data

Cloud Technology

May expose data outside of Switzerland. Data most vulnerable while on the move.

Legacy Technology

On-prem application often have limitations in their compatibility with cloud technology.

Group Technology Standards

Group-wide deployments such as Microsoft Office 365 could expose Swiss data.

Client Communication

Digital engagement with valued international clients poses security risk and risk of privacy law infringement.

Regulatory Reporting

Requirements to keep a register of all processing and report any security threat within 24 hours

Our Solution

Data Sovereignty & Residency

Our privacy by design, privacy by default approach leads to compliance with privacy regulations of all global jurisdictions.

Turns breaches into silent incidents

With our crypto-agile, quantum safe approach to zero-trust encryption of data, we ensure full protection whether data is at rest or in motion as it travels across the world.

Reduces blast radius to one

Our approach means the data is tamper-proof. Any sign of an unauthorised attempt to access data and it will turn into 'digital dust'.

Secures private cloud, AWS, Azure, GCP

Ensures complete protection as well as data sovereignty, residency and localisation compliance, using all Cloud Providers. Our approach protects all non US clients from the provisions of the Patriot and Cloud Acts.

Extended ROI

Our solution is a 'layer on' technology which enables legacy applications to access other Cloud-based systems, securely and compliantly.

Collaboration with Confidence

Our technology can be integrated with all software solutions delivering a stress free, compliant and secure journey wherever it travels. Security by design.

Client Experience

We provide completely secure communications with clients in which all data shared or generated is fully protected. Emails, documents, video, chat, onboarding portals, all completely safe.

Data Chain of Custody

We provide complete chain of custody on data with early threat detection and the ability to revoke access in case of suspicious activity.

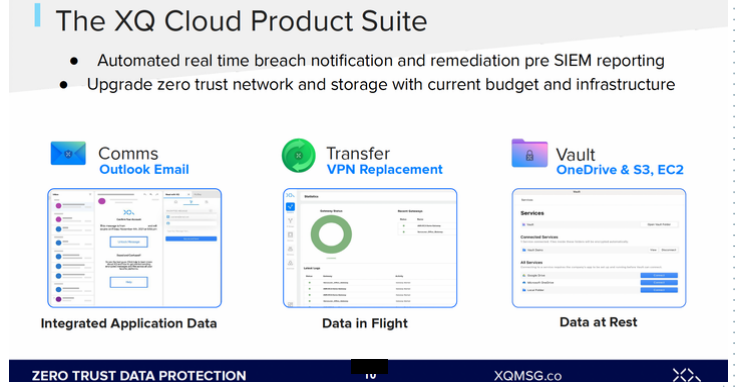

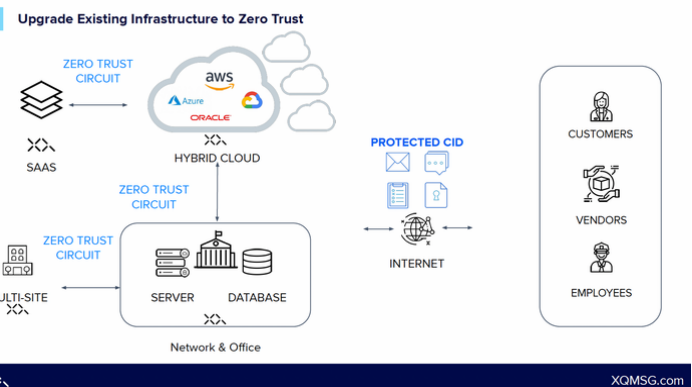

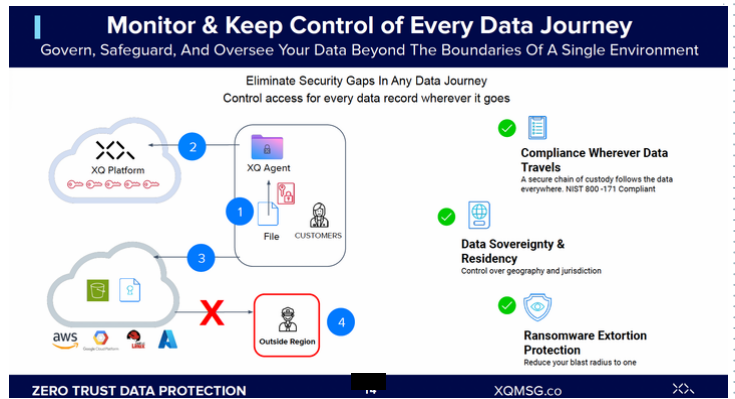

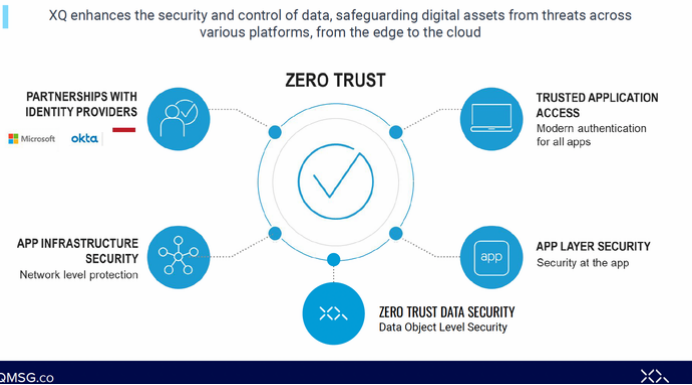

BRINGING COMPLETE PEACE OF MIND TO BANKING OPERATIONS

Securing Data,
Ensuring Privacy,
Promoting Cost Efficiency

About Us

We are a Swiss-based consultancy that offers solutions to enable Digital Transformation, with expertise in Client Experience and Digital Projects in both Swiss and International banks. We understand the complexities of working with global clients, global subsidiaries, global 3rd parties, yet needing to meet current and anticipated Swiss regulatory requirements. We have partnered with **XQ Message Inc** to bring their revolutionary technology to the Swiss Banking market. We are pleased to present you with the solution.
